

Cubic-DNC system is developed on the basis of NC machining process as above. Data Base is made through PC which is connected by LAN (The server is CAM system). Send and receive file through in/output port of CNC equipment or RBU (Remote Buffer Unit) from DNC PC. For this, DNC software have FTP function and can access drive of other PC network directly. DNC is the base module of Real Time Monitoring System (Option) which extent DNC system and machine work monitoring.

▢ Cubic-DNC V5 Feature

- Tool path Preview : reduce error.
- NC-Tool path Simulation : Increase Credibility.
- Single / Multi Transmission & Reception
- FTP Communication & Network folder Sharing Function : Direct Connection NC Server
- Multi DNC Function : 1:1, 1:2, 1:4, 1:8, 1:16
- Auto re-connection Wizard : re-sending function consider stop block.
- FTP Transmission (only FANUC i Series)
- Remote Server function
- Machining time estimation
- Protocol A type Support
